Flowgroup plc
("Flowgroup" or the "Company")

First commercial installations of Flow boiler now complete

Flowgroup plc (AIM: FLOW), which provides innovative energy technologies, energy supply and energy services, announces that the first commercial installs of the Flow boiler in customer homes have been completed.

These new customer installs were completed on time and to plan. The installed Flow boilers are performing in line with expectations, both heating the home and generating electricity.

As previously announced, the Company will now continue with installations, ramping up over the next six months and aiming for higher volume sales in the winter months.

A blog post with photos of an install is available at: <http://www.flowenergy.uk.com/blog/flow-boiler/flow-boiler-first-installs/>

Tony Stiff, Chief Executive Officer of Flowgroup, commented: *"We are very pleased to announce that we have completed the first commercial customer installations of the Flow boiler which are providing both heat and power. Initial customer satisfaction is high and the Flow Brand Ambassadors involved in the first installs are excited to be involved in making history by installing a real world's first – an affordable, electricity-generating boiler. We will continue with installations through the summer before ramping up to higher volume in the key winter period. I'd like to thank every member of our team for the effort they have put in to bring us to this historic moment."*
